Spatial Intelligence System and Method

ABSTRACT OF THE DISCLOSURE

5   The present invention provides techniques for analyzing and managing information having a spatial component. Techniques such as virtual schemas can be used to create meta models for analyzing spatial information, in conjunction with information about other centric entities, including business entities, technical entities, and governmental entities. Specific embodiments provide systems, methods, computer programs and

10   apparatus for populating databases in accordance with the defined meta models and analyzing information having spatial components in a variety of business, technical and governmental applications.
